

From AGR's Research Desk

Is the future domain-specific AI ?

AI is finding many use cases in everyday operations like HR, customer management, knowledge management, research, sales & marketing and many other functions. There is now acceptance that using AI has big advantages especially in efficiency and speed. However for many applications, these AI tools are expensive and have limited accuracy.

Can generic AIs truly address the real challenges faced by industry?

Bridging the Last Mile of AI Transformation: TRUST IS THE NEW INFRASTRUCTURE

At AGR , we recognize that the biggest barrier to enterprise AI isn't technology — it's trust. *As our white paper Bridging the Last Mile of AI Transformation reveals, that organizations underestimated cultural and organizational readiness.*

That's why AGR combines the H.U.M.A.N.E framework - a people-first, change-focused methodology - with our Cortex Intelligence Suite, delivering industry-calibrated, workflow-integrated AI solutions tailored to your business reality.

From BFSI document intelligence, to pharma field force insights, to actionable mining and metals data, our solutions move beyond pilots and hype - embedding AI as a trusted, strategic capability.
