

From AGR's Research Desk

Verifiably Human

A few years ago, the Dead Internet Theory whose broad tenets were that the internet was algorithm-driven and bots and automated content were widely deployed by vested interests to control perception and opinion was considered a conspiracy theory and thus not a part of mainstream discourse. Over the last few years, from the statements of the co-founder of Reddit, Sam Altman of OpenAI to data from Cloudflare

China's tech boom and lessons for India

The need for Resilience and Reinvention- What India Can Learn from China's Tech Rise

China's transformation from a low-cost manufacturing hub to a global innovation powerhouse offers valuable lessons for India. The challenge is not to replicate China's playbook, but to adapt its principles to India's own strengths and realities.

Two Asian Giants, Two Paths to Power

Few economic transformations in modern history rival China's rise from an agrarian economy in the 1980s to a global technology leader today. Once known for low-cost exports and imitation products, China now leads the world in AI research, electric vehicles, renewable energy, and advanced manufacturing.
