[Data centres are being redesigned: what comes next?](#)

By Sangita Iyer | AGR Knowledge Services

AI is fundamentally changing how data centres are built. Rising compute densities are reshaping power, cooling and supporting infrastructure. At the same time, the centre of gravity is shifting, with APAC emerging as a major growth region.

From high voltage DC and liquid cooling to energy storage and on site generation, the infrastructure ecosystem is evolving rapidly. Where will the next bottlenecks and opportunities emerge?

[Indigenous knowledge and the future of sustainable agriculture: Lessons for global supply chains](#)

By Pousali Giri | AGR Knowledge Services

Across food and agriculture, 2026 is shaping up to be a year where supply chain due diligence catches up with something many communities have understood for generations: land is never neutral. The EU's Deforestation Regulation is now live for large operators and extends to smaller businesses by mid-year. Genetic resource governance bodies are, for the first time, formally recognising Indigenous knowledge in their decision-making.
